## Stereo in-wall Amplifier

This amplifier is available in 3 different configurations, with 24 watts per channel. It fits in a single gang. Its configuration comes with pre-amp level signals and DC power inputs from the front and speakerwire connection in the rear. Another configuration that comes with it is a unit with only DC power input from the front and pre-amp level input signals, and speakerwire connection in the rear. Last option could be a unit with just a blank access panel in the front and all the connections for DC power, pre-amp level input signals and speakerwire connections in the rear.
