MINI TV / CATV TUNER

HideAway™ Series TV / CATV Tuner

Does your plasma TV, projector system, or studio monitors need a high quality tuner? Pragmatic has the answer. The HideAway™ Mini TV / CATV Tuner is the ideal choice for plasma monitors and high-end projection systems that access cable television or a traditional antenna. It is also the perfect choice for the broadcast studio that employs many monitors. The signal can now be translated in close proximity to the monitor or projector, which eliminates noise and interference typically encountered when routing TV / CATV sources over a long distance. The unit outputs a composite video signal, is operated via IR remote control, and contains an elegant LCD display.

There are a number of optional features available for the Mini Tuner. These include a high visibility LED display, S-Video output, MTS stereo decoder, and FM stereo tuner. Contact us to have the units customized to suit your needs.

The unit accepts a traditional cable or antenna input and is supplied with a very quiet 12VDC power supply.

<u>product specifications</u>
