

MORE PRAGMATIC PRODUCTS

MINI TV/CATV TUNER

The perfect choice for high-end projection systems, plasma monitors, or broadcast studio

monitor applications. Provides the highest quality tuning of cable, antenna, and FM radio signals. Wireless IR remote controlled.

PROFESSIONAL WIRELESS VIDEO

Pragmatic provides state-of-the-art wireless technology to law enforcement, bomb squads, fire departments, and the US Coast Guard. We also supply technology to premium security and surveillance system installers, and the DIY market. Do not confuse these products with the low

performing/low cost units currently offered to the consumer. Cameras can be ordered with sensitivity down to 0.05 lux!

All units operate at 900 MHz or 2.4 GHz frequencies. Call for special applications. *OEM inquiries welcome.*

MINI IN-WALL AMP

Delivers 20 Watts per channel of extremely clean power from inside a standard junction box! This is the high quality choice for in-wall zone amplification. Once installed, the wall plate is all that is visible!

The innovative engineers at Pragmatic Communications quietly provide important technical solutions to a number of industries. For example, Pragmatic produces technology used to test and support cellular telephone systems. Our wireless video technology is used by the high-end surveillance community, elite fire departments in portable thermal imaging cameras, and remote controlled robots used by law enforcement in extremely hazardous environments. **CATS™** represents yet another new technology offering from Pragmatic Communications.

CATS™ delivers incredible audio/video quality for the custom installer, period. This simple yet elegant system provides unequalled picture and sound quality with cable runs to 1000 feet! It distributes and controls up to 8 sources (DSS, DVD, CD, LD, VCR, etc.) into 8 different zones (or 16 zones with an extra hub/router) using only a single CAT5 cable! The system is compatible with any style of learning IR remote control, hand-held or keypad. The **CATS™** system works on CAT5, CAT3, or even unshielded telephone grade twisted pair wire. Despite using these inexpensive wires, **CATS™** is clearly superior to systems based on expensive audio and video cables in performance and cost. When one considers the cost and effort to install the long runs of separate audio, video, and control cables, **CATS™** clearly becomes cost competitive with existing technology.

The **CATS™** system uses Pragmatic's proprietary and patent pending **BDSP™** technology to eliminate any possible chance of ground loops, AC voltage interference, noise pick-up, or hum introduction into the signal path.

CATS = Complete Audio/video Transmission System
BDSP = Bandwidth Domain Signal Processing
