

Users manual for the DMS2.1T

The DMS 2.1 T. is a 2 **source(0)** single zone system designed to have 2 audio sources play over a large area, one at a time. The DMS2.1T has 2 sets of **audio inputs** (1) on the back of the DMS2.1T unit. The DMS2.1T also has an **RS232 input**(2) for control by a computer, an **infrared remote input**(3) and two **Cat 5 outputs**(4). This unit is best used to where you want to have audio playing but you also want to have either a second audio source for paging or for a different musical inputs.

To operate, plug in your two sources to the **RCA inputs**(5) on the back of the DMS2.1T. Hook up the included **power supply**(6) to the power input located on the back of the unit. You can now take a Cat 5 cable, plug it into the DM S 2.1T Cat 5 outputs, and run the cable and to one of the DMS2.1T. **compatible amplifiers**.(7) These amplifiers can be daisy-chained an infinite number of times so you can spread to the music or other audio over a very large area.
