

MCA 1248
12 CHANNEL AUDIOPHILE AMPLIFIER

OPERATION

Although high efficiency design is incorporated into this multi-channel power amplifier, an air space between units is recommended for rack mount installations to ensure optimum performance at any conditions.

Each input has switch-able mute and an acoustically tapered volume control for proper balancing of signal outputs.

Typically 8 ohms speaker loads are recommended to generate continuous power of 48 watts. The advanced protection circuitry will guard the amplifier from overload, over temperature, or speaker loads below 4 ohms.

CAUTION

This Mono-block Amplifier is designed to operate individually. Bridging or connecting speaker outputs together may cause damage to the power modules and will not be covered by Pragmatic's Warranty.

Thank you for choosing our High Performance 12 Channel Audiophiles Quality Amplifier. Should you need further assistance, please feel free to call customer support between 9AM to 5PM PST at (408) 542-0330.
