PRAGMATIC UPDATES A SYSTEM THAT TRANSMITS 4 AUDIO SOURCES TO 4 ZONES OVER 1 CAT5 CABLE

Sunnyvale, CA Feb 4, 2002

Starting at \$1995.00 MSRP, the DMS 4.4 is an inexpensive, audiophile quality system for distributing audio throughout a home, office or business. The DMS 4.4[™] by Pragmatic Communications Systems, Inc. transmits 4 audio sources to 4 zones (expandable to 8 or 16 zones) up to 1000 feet over category 5 cables while eliminating problems with ground loops, noise pick-ups, hum, and interference. It features a high performance FM & CATV tuner as a built-in source. Three additional external sources such as satellite, radio, CD jukebox, or hard disk audio can be connected. Each source can be individually controlled from any of the zones either by IR or in-wall keypad.

The system comes with an IR, four in-wall amplifiers (24 watts per channel (an optional 48 watt/channel is available), and the DMS 4.4 sending unit. The system delivers a dynamic range of > 100 dB, a signal-to-noise rate of > 100 dB and a frequency response of 20 Hz to 20 KHz. The system is especially easy to install in locations that were built with structured wiring over because most of the of the installation is already been done.

Pragmatic Communication Systems, Inc., located in Sunnyvale CA, was founded in 1994 by award-winning engineer Prasanna Shah. Throughout the world, Pragmatic products are used in the most technical and complicated audio and video applications. Their wireless and wired technology is used in life-critical situations by fire departments, in technically demanding applications by educational institutions, and in complex multi-room home entertainment systems by home entertainment installers.
