PRAGMATIC IMPROVES POPULAR TWISTED PAIR AUDIO TRANSMISSION SYSTEM

Pragmatic's TPA (Twisted pair audio) system has been improved by added metal shielding and new advanced circuitry. This significant improvement will prevent the potential for noise that could be incurred from outside sources. The TPA is a very simple to use system that consists of a powered sending unit (very small, just 2 ¼ inches by 1 ½ inches by 1 inch) and a receiving unit of the same size.

The TPA can be daisy-chained as many times as you need between the 3000 feet. This way you can send a line-level signal to an infinite number of amplifiers/speakers. It's revolutionary the SuperTranz™ circuit eliminates ground loops and noise pickup while providing a robust signal for amplification. This is the solution to sending a line level signal to powered speakers throughout a house, a restaurant, a shopping center, or any other application that requires a line-level signal over large distances. Because the signal to noise ratio has been improved, the system can produce sound at longer runs (up to 3000 feet) of Cat5 cabling.

Pragmatic's founder and President, Prasanna Shah explained, "the line-level audio signals can now be transmitted and received over low cost category five, category three or regular telephone wire. This design provides important advantages over conventional technology by improving signal quality while saving time and money". The TPA receiver can use Pragmatic's own IWA™ (In-Wall Amplifier) or SAA™ (Stereo Audio Amplifier) to power an in-wall or floor-standing loudspeaker.

Pragmatic has been in business since 1994 and has accumulated a diverse product base with emphasis on innovative audio and video distributions systems. Pragmatic is mostly known for their groundbreaking product, CATS™ that transmits both studio quality audio and professional grade video over one cat5 cable. In addition to CATS, Pragmatic also manufactures studio-quality amplifiers, tuners, wired and wireless A/V products. Pragmatic constantly adjusts and improves its products to stay one step ahead of the customers' needs. For additional information please call or email to James Davidson.
